

NOTABLES REPORTED.

EXTRA MORNING, SEPT. 1, IN 2.

AN IMPORTANT MASTERS.

Experiences show that the art of sewerage is dangerous to health and posterior to life, and that it is imperative to dispose of sewage and the effects of its deadly influence. In all works of sewerage it is important that the same should be made for disposal the sewers in order to keep them clean, healthy and in efficient working order. A very sewer has more or less an emanation now, the volume being so great as to cause a small and sudden increase will reach the deposit of sewage. This is the condition of the sewers of Portland today. During eight or perhaps nine months of the year, no time is given the means of cleaning sewers, but for the period extending from the middle of June to the middle of September, the city is without natural or artificial means of necessary flushing. From the 5th to the 30th of June, of this year, the rainfall was thirty-five hundredths, in August seven-hundredths, and at no time during this period was the rainfall sufficient to thoroughly cleanse the sewers. No sensible person who knows the facts will say that the sewers of Portland do not require flushing; yet the city has made no provision for this important work. The method is simple and inexpensive. It is necessary only to dam the sewer near its mouth which may be done with a board, then run a stream from a fire engine until the sewer is filled with water, and then wait until the water has damped the soil around the board, then remove the board and let the water run off.

The world has a great many big jobs, and it can be difficile to us, as our nation, to do the aggregate of all the independent ones of the world in 1890 amounted to \$17,467,695,215.

The last rain in 1890 was \$16,392,651,685, an increase of thirty-five percent in twelve years.

During this decade the figures swelled to \$17,157,645,188, an sixty-five per cent advance.

During the decade from 1870 to 1880 the total

was \$11,400,000, and further swelled to \$23,296,114,753, a further advance of thirty-six percent.

This makes the average annual increase for the period between 1870 and 1890 \$1,893,355,073.

These are pretty large figures, but the world seems to be big enough to owe it. Germany, Holland, Denmark, England and the United States are the only nations that are reducing their indebtedness.

But simple and economical as this remedy is, the city cannot apply it, because there is scarcity of water. To such properties has the city given, that the water company by running their pumping machines day and night are scarcely able to supply the demand for domestic use and to keep the fire system filled. Indeed, many inhabitants of the southwestern part of town are without water, except during the early morning hours. Extended use of street water, and the new reservoir, will be the means of better distribution, but not of larger supplies. The city's contract with the water company requires that the latter furnish water for fire purposes and for the city buildings and no more. Should the city decide to flush sewers, the water must be taken from cisterns, and these when empty might remain so for forty-eight hours, involving danger from fire.

Much danger of disease can be averted if housekeepers will take the trouble to keep private drains clean by the free use of water and disinfectants. The city can easily be compelled to do this, and the employees constitute one-half of the population of the nation. According to Poor, it requires twelve men per mile to operate a railway, including workmen in the construction shops.

Representatives from the southern states interested in the free work, pledge their respective states to supplement the government appropriation of \$1,000,000 by a state fund, to be set apart for the road, and to turn the money over to the board that the work may be presented under one management. This is a wise policy, and meets with the approbation of the commission, the secretary of war and the engineers in charge.

The California district in which Gov. Woods is running for congress, fourth is democratic by a small majority. His present representative is a Radical, a republican, who owes his election to his Spanish name and descent, the district taking in several of the old Spanish settlements. Woods' election is by no means certain.

Touching the Indian question in the northwest, Lieut. Theo. W. Reynolds, in the United Service Magazine, writes very plainly that the greatest obstacle preventing the noble red man from rising to a greatness and other honorable labor is the white man's whisky.

MEETING NOTICES.

Virginia House of Delegates, No. 1—Meeting this Friday evening at 7 P.M.—Rev. Dr. J. H. McNEIL, Secy.

Catharine Engle, Esq., No. 2—Regular meeting this Friday evening at 7:30 P.M.—Rev. W. J. KELLY, Secy.

Catharine Engle, Esq., No. 3—Regular meeting this Friday evening at 7:30 P.M.—Rev. W. J. WAGNER, Secy.

MARRIED.

In East Portland, Sept. 1, Michael Rice, aged 40 years, native Ireland, to his half-partner two from his residence in Holland addition.

At the residence of his mother, Mrs. Kate Smith, Mrs. Smith, of East Portland, of typhoid fever. Joseph Smith, aged 21 years.

TUESDAY MORNING, SEPT. 5, 1882.

MUNING NEWS.

Jacksonville Times.
Oregon City Times.
The Oregonian.

J. M. Jackson has a promising quartz deposit in the Hill region.

Patterson Co., have a plant at work in their Beaver Creek Coal mine, Westwood, Oregon.

W. H. Miller, of Astoria, has established a post office in the mountains within about twelve miles of that place.

Derrick & Co.'s quartz mill is ready to receive good products on the ledges.

Jackson Bay was low Monday, from which it is evident that the water is falling at its claim in Fox River. An excellent result has already been assured.

Decker & Co. of Seattle, Josephine county, have a plant with better results than ever, having taken over several thousand dollars. Their value looks like a dream.

Chase Co. have contracted for the delivery of 2000 lbs. of coal and will open up on Jacobson Creek on the extreme south west winter.

We learn that the miners are getting along taken over several thousand dollars. Their value looks like a dream.

Chase Co. have contracted for the delivery of 2000 lbs. of coal and will open up on Jacobson Creek on the extreme south west winter.

We learn that the miners are getting along taken over several thousand dollars. Their value looks like a dream.

H. A. Crysler of Sam's Valley, yesterday, drove his well to a depth of 45 feet. A failed well was started at this depth, after digging through several inches of gravel.

There is plenty of coal in Jackson county.

St. Mary's Academy building at Jacksonville, will be finished ready for occupancy by the 11th inst.

FINANCE AND COMMERCE.
